## **Отчёт по лабораторной работе №2**

По дисциплине:  
«Технологии машинного обучения»

По теме:  
« Изучение библиотек обработки данных »

Выполнил:

Столяров Ю. А.

Москва, 2020

# Цель лабораторной работы

Изучение библиотеки обработки данных Pandas

## Задание

In this task you should use Pandas to answer a few questions about the Adult dataset:

1. How many men and women (sex feature) are represented in this dataset?
2. What is the average age (age feature) of women?
3. What is the percentage of German citizens (native-country feature)?
4. What are the mean and standard deviation of age for those who earn more than 50K per year (salary feature) and those who earn less than 50K per year?
5. Is it true that people who earn more than 50K have at least high school education? (education – Bachelors, Prof-school, Assoc-acdm, Assoc-voc, Masters or Doctorate feature)
6. Display age statistics for each race (race feature) and each gender (sex feature). Use groupby() and describe(). Find the maximum age of men of Amer-Indian-Eskimo race.
7. Among whom is the proportion of those who earn a lot (>50K) greater: married or single men (marital-status feature)? Consider as married those who have a marital-status starting with Married (Married-civ-spouse, Married-spouse-absent or Married-AF-spouse), the rest are considered bachelors.
8. What is the maximum number of hours a person works per week (hours-per-week feature)? How many people work such a number of hours, and what is the percentage of those who earn a lot (>50K) among them?
9. Count the average time of work (hours-per-week) for those who earn a little and a lot (salary) for each country (native-country). What will these be for Japan?

Unique values of all features:

- age: continuous.
- workclass: Private, Self-emp-not-inc, Self-emp-inc, Federal-gov, Local-gov, State-gov, Without-pay, Never-worked.
- fnlwgt: continuous.
- education: Bachelors, Some-college, 11th, HS-grad, Prof-school, Assoc-acdm, Assoc-voc, 9th, 7th-8th, 12th, Masters, 1st-4th, 10th, Doctorate, 5th-6th, Preschool.
- education-num: continuous.
- marital-status: Married-civ-spouse, Divorced, Never-married, Separated, Widowed, Married-spouse-absent, Married-AF-spouse.
- occupation: Tech-support, Craft-repair, Other-service, Sales, Exec-managerial, Prof-specialty, Handlers-cleaners, Machine-op-inspct, Adm-clerical, Farming-fishing, Transport-moving, Priv-house-serv, Protective-serv, Armed-Forces.
- relationship: Wife, Own-child, Husband, Not-in-family, Other-relative, Unmarried.
- race: White, Asian-Pac-Islander, Amer-Indian-Eskimo, Other, Black.
- sex: Female, Male.
- capital-gain: continuous.
- capital-loss: continuous.
- hours-per-week: continuous.
- native-country: United-States, Cambodia, England, Puerto-Rico, Canada, Germany, Outlying-US(Guam-USVI-etc), India, Japan, Greece, South, China, Cuba, Iran, Honduras, Philippines, Italy, Poland, Jamaica, Vietnam, Mexico, Portugal, Ireland, France, Dominican-Republic, Laos, Ecuador, Taiwan, Haiti, Columbia, Hungary, Guatemala, Nicaragua, Scotland, Thailand, Yugoslavia, El-Salvador, Trinidad&Tobago, Peru, Hong, Holand-Netherlands.
- salary: >50K,<=50K

## Ход выполнения лабораторной работы

In [1]:

```
import pandas as pd
data = pd.read_csv('adult.data.csv')
data.head()
```

Out[1]:

	age	workclass	fnlwgt	education	education-num	marital-status	occupation	relationship	race	sex	capital-gain	capital-loss	hours-week
0	39	State-gov	77516	Bachelors	13	Never-married	Adm-clerical	Not-in-family	White	Male	2174	0	
1	50	Self-emp-not-inc	83311	Bachelors	13	Married-civ-spouse	Exec-managerial	Husband	White	Male	0	0	
2	38	Private	215646	HS-grad	9	Divorced	Handlers-cleaners	Not-in-family	White	Male	0	0	
3	53	Private	234721	11th	7	Married-civ-spouse	Handlers-cleaners	Husband	Black	Male	0	0	
4	28	Private	338409	Bachelors	13	Married-civ-spouse	Prof-specialty	Wife	Black	Female	0	0	

### 1. How many men and women (sex feature) are represented in this dataset?

In [2]:

```
data['sex'].value_counts()
```

Out[2]:

```
Male      21790
Female    10771
Name: sex, dtype: int64
```

### 2. What is the average age (age feature) of women?

In [3]:

```
data.loc[data['sex'] == 'Female', 'age'].mean()
```

Out[3]:

```
36.85823043357163
```

### 3. What is the percentage of German citizens (native-country feature)?

In [4]:

```
print("{}%".format(data[data["native-country"] == "Germany"].shape[0] / data.shape[0]))
```

```
0.004207487485028101%
```

### 4. What are the mean and standard deviation of age for those who earn more than 50K per year (salary feature) and those who earn less than 50K per year?

In [5]:

```
ages1 = data[data["salary"] == "<=50K"]["age"]
ages2 = data[data["salary"] == ">50K"]["age"]
print("<=50K: {0} ± {1} years".format(ages1.mean(), ages1.std()))
print(">50K: {0} ± {1} years".format(ages2.mean(), ages2.std()))
```

```
<=50K: 36.78373786407767 ± 14.02008849082488 years
>50K: 44.24984058155847 ± 10.519027719851826 years
```

### 5. Is it true that people who earn more than 50K have at least high school education? (education - Bachelors, Prof-school, Assoc-acdm, Assoc-voc, Masters or Doctorate feature)

In [6]:

```
high_educations = ["Bachelors", "Prof-school", "Assoc-acdm", "Assoc-voc", "Masters", "Doctorate"]
def high_educated(e):
    return e in high_educations

data[data["salary"] == ">50K"]["education"].map(high_educated).all()
```

Out[6]:

False

**6. Display age statistics for each race (race feature) and each gender (sex feature). Use groupby() and describe(). Find the maximum age of men of Amer-Indian-Eskimo race.**

In [7]:

```
data.groupby(["race", "sex"])["age"].describe()
```

Out[7]:

		count	mean	std	min	25%	50%	75%	max
race	sex								
Amer-Indian-Eskimo	Female	119.0	37.117647	13.114991	17.0	27.0	36.0	46.00	80.0
	Male	192.0	37.208333	12.049563	17.0	28.0	35.0	45.00	82.0
Asian-Pac-Islander	Female	346.0	35.089595	12.300845	17.0	25.0	33.0	43.75	75.0
	Male	693.0	39.073593	12.883944	18.0	29.0	37.0	46.00	90.0
Black	Female	1555.0	37.854019	12.637197	17.0	28.0	37.0	46.00	90.0
	Male	1569.0	37.682600	12.882612	17.0	27.0	36.0	46.00	90.0
Other	Female	109.0	31.678899	11.631599	17.0	23.0	29.0	39.00	74.0
	Male	162.0	34.654321	11.355531	17.0	26.0	32.0	42.00	77.0
White	Female	8642.0	36.811618	14.329093	17.0	25.0	35.0	46.00	90.0
	Male	19174.0	39.652498	13.436029	17.0	29.0	38.0	49.00	90.0

In [8]:

```
data[(data["race"] == "Amer-Indian-Eskimo") & (data["sex"] == "Male")]["age"].max()
```

Out[8]:

82

**7. Among whom is the proportion of those who earn a lot (>50K) greater: married or single men (marital-status feature)? Consider as married those who have a marital-status starting with Married (Married-civ-spouse, Married-spouse-absent or Married-AF-spouse), the rest are considered bachelors.**

In [9]:

```
def is_married(m):
    return m.startswith("Married")

data["married"] = data["marital-status"].map(is_married)
(data[(data["sex"] == "Male") & (data["salary"] == ">50K")]
 ["married"].value_counts())
```

Out[9]:

```
True      5965
False      697
Name: married, dtype: int64
```

**8. What is the maximum number of hours a person works per week (hours-per-week feature)? How many people work such a number of hours, and what is the percentage of those who earn a lot (>50K) among them?**

In [10]:

```
m = data["hours-per-week"].max()
print("Maximum is {} hours/week.".format(m))

people = data[data["hours-per-week"] == m]
c = people.shape[0]
print("{} people work this time at week.".format(c))

s = people[people["salary"] == ">50K"].shape[0]
print("{} get >50K salary.".format(s / c))
```

Maximum is 99 hours/week.  
85 people work this time at week.  
29.411765% get >50K salary.

**9. Count the average time of work (hours-per-week) for those who earn a little and a lot (salary) for each country (native-country). What will these be for Japan?**

In [11]:

```
p = pd.crosstab(data["native-country"], data["salary"],
                values=data['hours-per-week'], aggfunc="mean")
p
```
